A Biological process
(n = 119 terms; bar-end numbers = genes)
negative regulation of apoptotic process
27
long-chain fatty acid biosynthetic process
10
xenobiotic metabolic process
15
epidermal growth factor receptor signaling pathway
11
xenobiotic catabolic process
9
steroid metabolic process
10
arachidonate metabolic process
9
epoxygenase P450 pathway
7
retinol metabolic process
9
omega-hydroxylase P450 pathway
6

10
−log10 (BH-adj. P)
Cellular component
(n = 29 terms; bar-end numbers = genes)
cytoplasm
89
mitochondrion
33
cytosol
65
membrane raft
13
plasma membrane
66
nucleoplasm
49
signaling receptor complex
11
protein-containing complex
19
dendrite
14
nucleus
68
0
5
10
−log10 (BH-adj. P)
Molecular function
(n = 66 terms; bar-end numbers = genes)
protein kinase activity
30
enzyme binding
26
ATP binding
44
kinase activity
21
arachidonate 14,15-epoxygenase activity
8
protein serine/threonine kinase activity
23
protein serine kinase activity
21
protein tyrosine kinase activity
14
oxidoreductase activity
18
oxidoreductase activity, acting on paired donors, with incorporation or reduction of molecular oxygen
11
0
10
−log10 (BH-adj. P)
B
KEGG pathways (top 20 by BH-adjusted P; 114 significant; 134 core targets)
Lipid and atherosclerosis
Pathways in cancer
Serotonergic synapse
Endocrine resistance
Chemical carcinogenesis - reactive oxygen species
Proteoglycans in cancer
ErbB signaling pathway
Chemical carcinogenesis - receptor activation
Chemical carcinogenesis - DNA adducts
EGFR tyrosine kinase inhibitor resistance
Prostate cancer
Arachidonic acid metabolism
Drug metabolism - cytochrome P450
Non-small cell lung cancer
Bladder cancer
PI3K-Akt signaling pathway
VEGF signaling pathway
HIF-1 signaling pathway
Yersinia infection
Central carbon metabolism in cancer
