
Top-ranked Vina pose per pair: 7 pairs are shown in the main figure, 2 are reported as structural only, 1 edge was excluded; blank cells = pair not docked. Hatching: receptor failed co-crystal re-docking (RMSD ≥ 2 Å), so the score is structural only. Red dashed box: the SEA record failed the InChIKey check, so this metabolite-target edge is absent from scheme A. Scores indicate structural plausibility, not affinity, and are not comparable across receptors.
