

Scheme A. Expanded set = 134 core targets + the 36 GeneMANIA-predicted partners of AKT1 and CTNNB1 (only these two hubs were expanded); STRING edges restricted from the original 179-gene query. MCODE defaults: degree cutoff 2, node score cutoff 0.2, K-core 2, max depth 100, haircut on, fluff off. Cluster enrichment: DAVID functional annotation chart (Homo sapiens background; KEGG_PATHWAY and GOTERM_BP/CC/MF_DIRECT; Benjamini; E81, queried 2026-11-01), same categories and correction as Fig 3; the full table is Table S-MCODE-enrichment.
