
GSE102349 (88 of 113 treatment-naive NPC with a progression time; 25 without time/event excluded). Event = disease progression, censor = last follow-up. FPKM log2(x+1), z-scored; composite = mean of six z-scores. Plan fixed before running (E66, AI preliminary calculation); PTGS2 unadjusted HR also appeared in E21. Exploratory analysis (supplementary material): no signal associated with progression was seen; this cannot be taken as evidence of no association.
